Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 28 March 2001.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Rosenberg et al. (US Pat. No. 6,211,861 B1).

In regard to claims 1-8, Rosenberg et al. teach an optical mouse integrated circuit comprising: an unitary substrate; an optical sensor (112) generating data; an analog-to digital converter receiving and processing the data; a microprocessor (110) receiving the processed data; and memory (122) connected to the microprocessor; wherein the optical sensor (112), analog-to digital converter (col. 14, lines 30-34), microprocessor, and memory are formed on the unitary substrate (see fig. 4). Rosenberg et al. also teach that optical mouse (12) cal memory (122), such as RAM and/or ROM, is preferably coupled to microprocessor (110) in mouse (12) (col. 12, lines 47-60) and processor (110) can operate independently of host computer (14_ by reading sensor signals and can include multiple processor and/or co-processor chips, and/or digital signal processor (DSP) capability (col. 11, lines 7-31) and also hardware can be provided locally to mouse (12) similar to microprocessor (110) (col. 12, lines 1-9). Thus, it would have been obvious to one of ordinary skill in the art at the time of the invention by providing an analog-to digital converter, a microprocessor, and an optical sensor into a single substrate in order the user customize user interface operations and power consumption savings.

Art Unit: 2674

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Rosenberg and Hilton et al. are made of record to show various types of optical mouse with integrated circuitry.
